▲ COMPREHENSIVE METABOLIC PANEL

GLUCOSE	122 H	Reference Range: 65-99 (mg/dL)
Fasting reference interval For someone without known diabetes, a glucose value between 100 and 125 mg/dL is consistent with prediabetes and should be confirmed with a follow-up test.

For patients >49 years of age, the reference limit for Creatinine is approximately 13% higher for people identified as African-American.

▲ D-DIMER, QUANTITATIVE

D-DIMER, QUANTITATIVE**0.50 H**

Reference Range: <0.50 (mcg/mL FEU)

The D-Dimer test is used frequently to exclude an acute PE or DVT. In patients with a low to moderate clinical risk assessment and a D-Dimer result <0.50 mcg/mL FEU, the likelihood of a PE or DVT is very low. However, a thromboembolic event should not be excluded solely on the basis of the D-Dimer level. Increased levels of D-Dimer are associated with a PE, DVT, DIC, malignancies, inflammation, sepsis, surgery, trauma, pregnancy, and advancing patient age.
